

# Cisco Meraki MV Smart Cameras for K-12 Schools

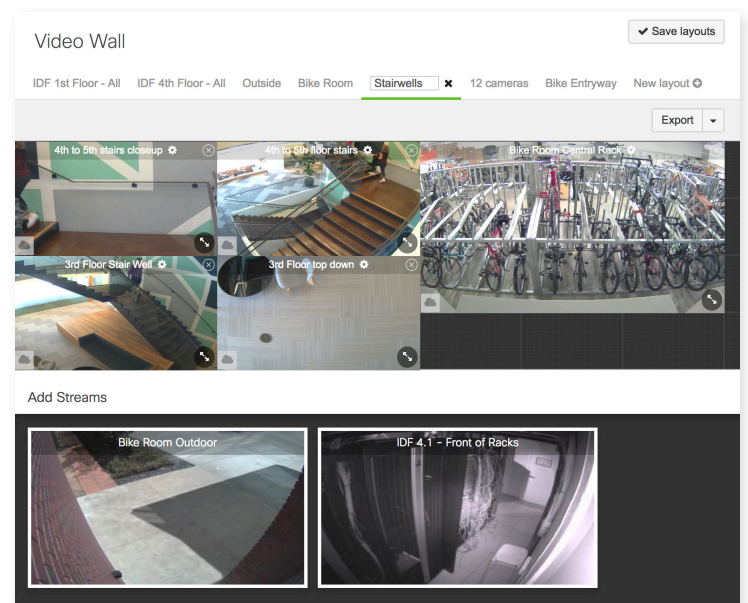

Intelligence, security, and simplicity in a single package

## Overview

Cisco Meraki MV smart cameras make it easy for K-12 schools across Australia to help keep students and faculty safer with intelligent tools and powerful, advanced analytics. Video is stored and processed on the camera, and all configuration and management is done from the Meraki dashboard. This simplified architecture reduces the cost and complexity associated with traditional systems, and eliminates the need for NVRs, software, or plugins.

Like all Meraki products, MV cameras provide zero-touch deployment and remote, centralised management through the cloud. Using just serial numbers, an administrator can add devices to the Meraki dashboard and begin configuration before the hardware even arrives on site.

Through the web-based dashboard, easily stream video and create video walls to monitor key areas at once. With granular access permissions, department heads and law enforcement can access footage from anywhere. With the MV Sense API, the school's IT team can access MV's machine learning-based analytics to create custom solutions that enhance the safety and security of the school environment.

## Key Features

- Remote management through the cloud
- Intuitive dashboard interface is accessible from an internet browser, requiring minimal training
- On-camera video storage and optional cloud archive eliminate network video recorders (NVR) or servers, minimising physical infrastructure
- Easily scale from one camera to thousands
- Time-saving tools like motion search and video clip export
- Granular access controls and user permissions
- Mobile app support for quick camera installation
- Wireless capable for easy analog upgrades
- Built-in analytics like motion heat maps and machine learning-based object detection

# MV K-12 Case Studies

## St Mary Star of the Sea College

- NSW school uses Meraki MR, MS, MV to support 1,100 students and 130 staff
- MVs provide increased visibility and security to gates surrounding campus
- Meraki channel optimisation tools help achieve more capacity as population grows

*"The MV Security Cameras have been installed outdoors to keep an eye on the electronic gates installed around campus. Within just the first week of installation, the cameras were able to provide results for increased security and even assisted in a situation where there was a collision with the gate. The team accessed dashboard and pulled up relevant clips of videos with just a few mouse clicks" - Martin Janiszewski, IT Manager.*

## John XXIII College

- WA school employed Meraki MV to support the needs of its 1,500+ students and 240 staff
- MX security appliances and MV smart cameras allow to enhance the school's IT services
- With more free time, ICT team is able to strategically plan long-term initiatives

*"Since implementing the new Meraki MV system, we've noticed a significant impact. Our facilities manager is now no longer burdened with the sole responsibility of trolling through CCTV footage to identify incidents. Meraki*

*allows easy delegation and access to key stakeholders who can now manage the cameras relevant to their area of governance. Users of the system are not only able to easily find and export relevant footage but can also gain valuable insights into the activity surrounding a camera. For example, how many people frequent a certain area or how many cars have passed within field of view. Such analytics can help mould future developments which may include parking space or relevant furnishings of an area where people may meet." - Yugon Chobanoff, ICT Operations Manager.*

### Benefits of the Cloud

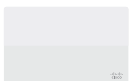

- Automatic firmware upgrades and bug fixes
- Hardware purchases gain value over time with access to new features as they're developed
- No software, plugins, or drivers to download everything is hosted natively in-browser
- Access all security cameras from anywhere in the world

### Easy Licensing Model

- 1 license per each piece of hardware
- License includes 24/7 end customer support
- Provides access to the newest feature releases and bug fixes

## The Meraki Product Portfolio

All Cisco Meraki devices are centrally and securely managed from the cloud using a single web-based dashboard. Our feature-rich, intuitive architecture enables customers to save time, reduce operating costs, and solve new business problems.

**Wireless Access Points**  
Optimised for high-density with 802.11ac & Bluetooth

**Security Appliances**  
Feature-rich security & unified threat management platform

**Switches**  
Layer 2 & Layer 3 switches for mission-critical networks

**Insight**  
Improved user experience & deeper insight into your WAN

**Endpoint Management**  
Unified management & control of thousands of devices

**Security Cameras**  
Streamlines deployment & monitoring of video security systems

**Contact a Meraki representative today to learn about our risk-free trial program!**
